Journal Impact Factor

The Journal Impact Factor (JIF) is a journal-level metric calculated from articles published in a journal over a two-year period and used with careful attention to the many factors that influence citation rates of the subject area and type of journal. The Journal Impact Factor can be used for academic evaluation for tenure, it is inappropriate to use a journal-level metric for articles. [Learn more](#)

Rank by Journal Impact Factor

9

Journals within a category are sorted in descending order by Journal Impact Factor (JIF) resulting in the Category Ranking below. A separate rank is shown for each category in which the journal is listed in JCR. Data for the most recent year is presented at the top of the list, with other years shown in reverse chronological order. [Learn more](#)

Journal's performance

Journal Impact Factor ¹⁰

The Journal Impact Factor (JIF) is a journal-level metric calculated from data indexed in the Web of Science Core Collection. It should be used with careful attention to the many factors that influence citation rates, such as the volume of publication and citations characteristics of the subject area and type of journal. The Journal Impact Factor can complement expert opinion and informed peer review. In the case of academic evaluation for tenure, it is inappropriate to use a journal-level metric as a proxy measure for individual researchers, institutions, or articles. [Learn more](#)
